### Idea Defense Feedback (Screenshot)

### Phase 2 (SDS) Feedback (Screenshot)

*Vistelligence*  
**Abstract**

Vistelligence is an AI-powered web application designed to make the visa application process smoother and more accessible for individuals by analyzing a user's unique profile, including factors like education, financial situation, and career aspirations, to deliver tailored recommendations for visa types, countries, and universities. The platform goes beyond suggestions by predicting visa approval chances, providing interview preparation tools, and offering practical guidance on document preparation, financial planning, and risk management. What sets Vistelligence apart is its focus on enhancing the user experience, with features like a dynamic visa cost estimator to help users budget effectively and an interactive community forum that fosters peer-to-peer support and knowledge sharing, reducing the stress of navigating complex processes while creating a sense of community among users pursuing similar goals. Built on real-time data and advanced AI algorithms, Vistelligence ensures accuracy and reliability in its recommendations, empowering users to make confident decisions about their global mobility journey. Whether seeking to travel, study, or invest abroad, Vistelligence serves as a comprehensive solution, streamlining every step of the process and transforming overwhelming procedures into manageable steps, enabling users to focus on achieving their dreams and building brighter futures on an international stage.

# 1.Introduction

Vistelligence provides personalized visa type recommendations, country and university suggestions, and visa approval predictions. It includes interview preparation, action plans, and real-time updates on policies. The platform features a user-friendly interface and a community forum for advice-sharing. It simplifies the visa process for students, professionals, and investors. Here's the content for each section regarding the document to explain:

## 1.1 Product

Visa applicants often struggle with understanding which visa types suit their needs, predicting approval chances, and preparing the necessary documentation. The existing platforms provide generic advice, leaving applicants without personalized guidance, leading to rejections and inefficiencies. Vistelligence addresses these issues with AI-powered solutions for personalized visa recommendations and end-to-end process support.

## 1.2 Background

With the increasing demand for international travel, education, and work opportunities, visa application processes have become a crucial aspect of global mobility. As we know that the current tools lack personalization and rely heavily on static information. Integrating artificial intelligence into this domain can transform the experience, reducing uncertainty and improving approval rates.

## 1.3 Objective(s)/Aim(s)/Target(s)

The objectives of this platform are:

- It simplifies visa application processes using AI.
- It provides personalized, actionable recommendations for visas, countries, and universities.
- It enhances the success rate of applications with data-driven insights.
- It provides a community for peer-to-peer learning and expert support.

## 1.4 Scope

Vistelligence covers the entire visa application life-cycle:

- Personalized visa, country, and university suggestions.
- AI-based approval predictions and interview preparation.
- Comprehensive application strategies and real-time cost estimations.
- Community forums for shared experiences and collaborative learning.

This platform caters to students, professionals, and investors seeking visas worldwide. Vistelligence offers an AI-driven platform that simplifies the visa application process, providing personalized recommendations for visa types, universities, and countries. It builds trust by focusing on high success rates and personalized strategies for global mobility.

## 1.5 Business Goals

Business goals of Vistelligence are given below:

- Streamline the visa application process by offering AI-powered guidance and reducing confusion for applicants.
- Increase visa approval chances through personalized recommendations based on user profiles and real-time data.
- Establish a one-stop platform for country, visa, and university selection, saving time and effort.
- Support informed decision-making with accurate cost estimation and strategic planning.
- Build a trusted digital brand in the global education and immigration space through smart tech and community support.

## 1.6 Document Conventions

This Software Requirements Specification (SRS) follows the typographical and formatting conventions outlined below for clarity and consistency:

- **Font Style:** The font used throughout the document is Times New Roman.
- **Font Size:**
  - I. The **body text** is set at **12-point size** to ensure readability.
  - II. **Subheadings** are styled with a **16-point size** for better differentiation and hierarchy.
  - III. **Major page titles** or **section headers** are formatted with a **28-point size** to highlight important sections and maintain a clear structure.
- **Bold Text:** Bold font is used to highlight **key terms** or **important sections** for quick reference.
- **Bullet Points and Numbering:** Bullets and numbered lists are used for clarity and ease of reference in sectioned or grouped information.
- In **Reference section** the name of articles or books are in italic.

## 1.7 Miscellaneous

### **Team Communication:**

Weekly Zoom meetings and a dedicated Whats App group will be used for updates and discussions to maintain coordination.

### **Version Control:**

GitHub will be utilized for collaborative development and version management, ensuring seamless teamwork.

### **Documentation Standards:**

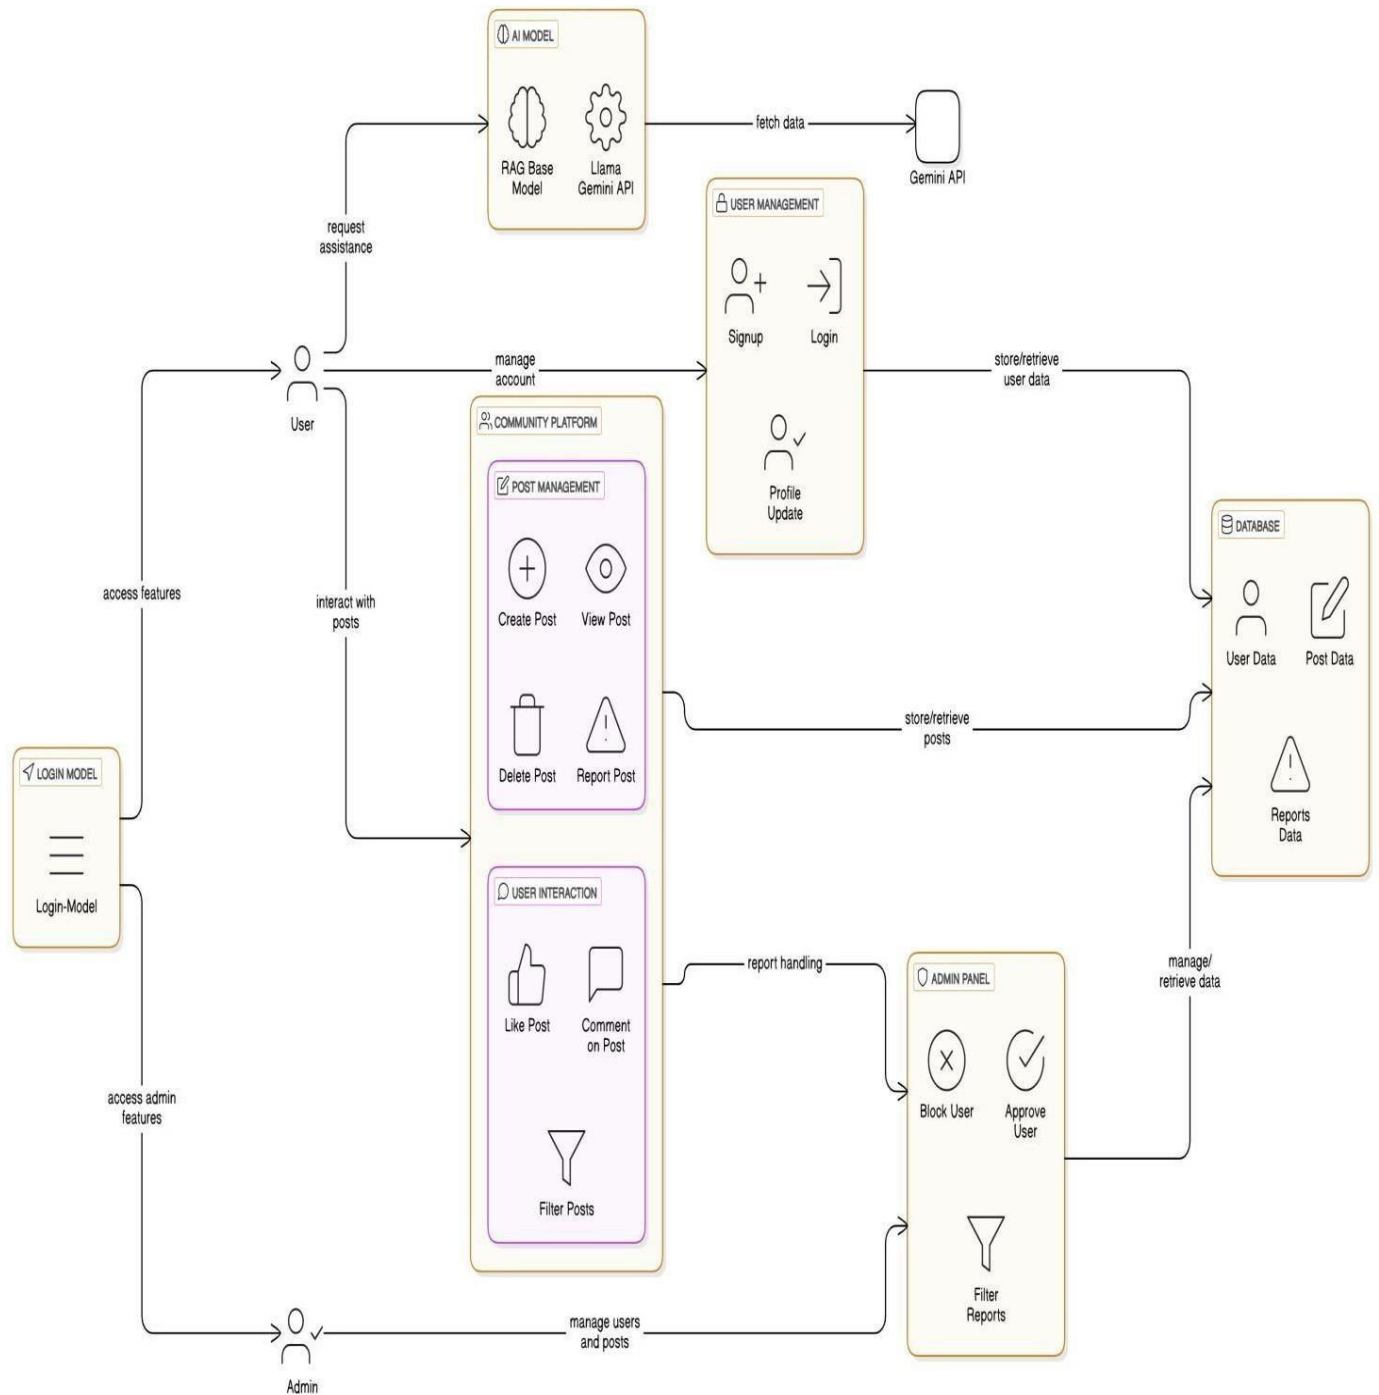

All documentation will follow IEEE standards to maintain clarity and consistency throughout the project.

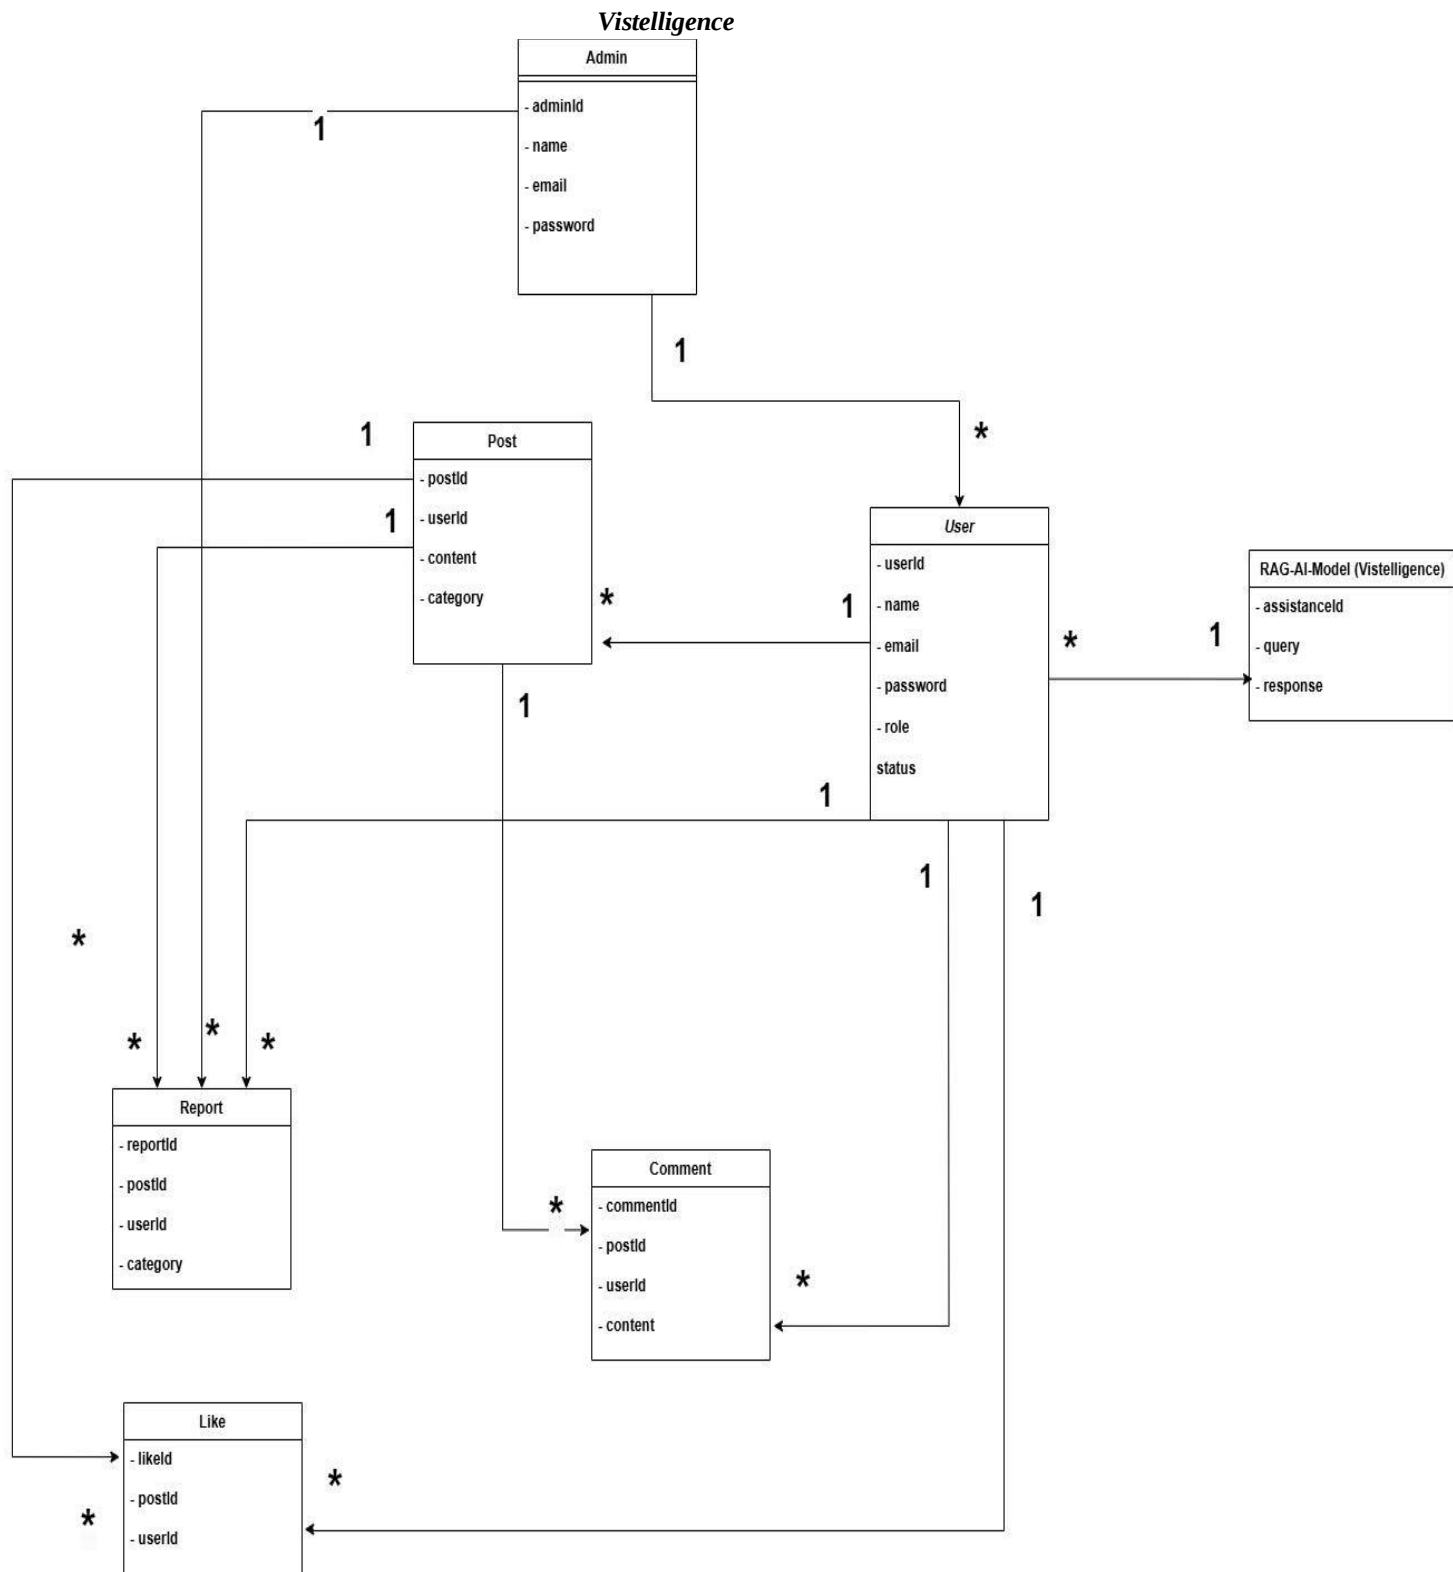

***Design Tools:***

Canva will be used for UI/UX mockups, and Draw.io for creating diagrams and visual models.

## 2. Technical Architecture

### 2.1 Application and Data Architecture

**Figure 2.1.1: ERD diagram:**

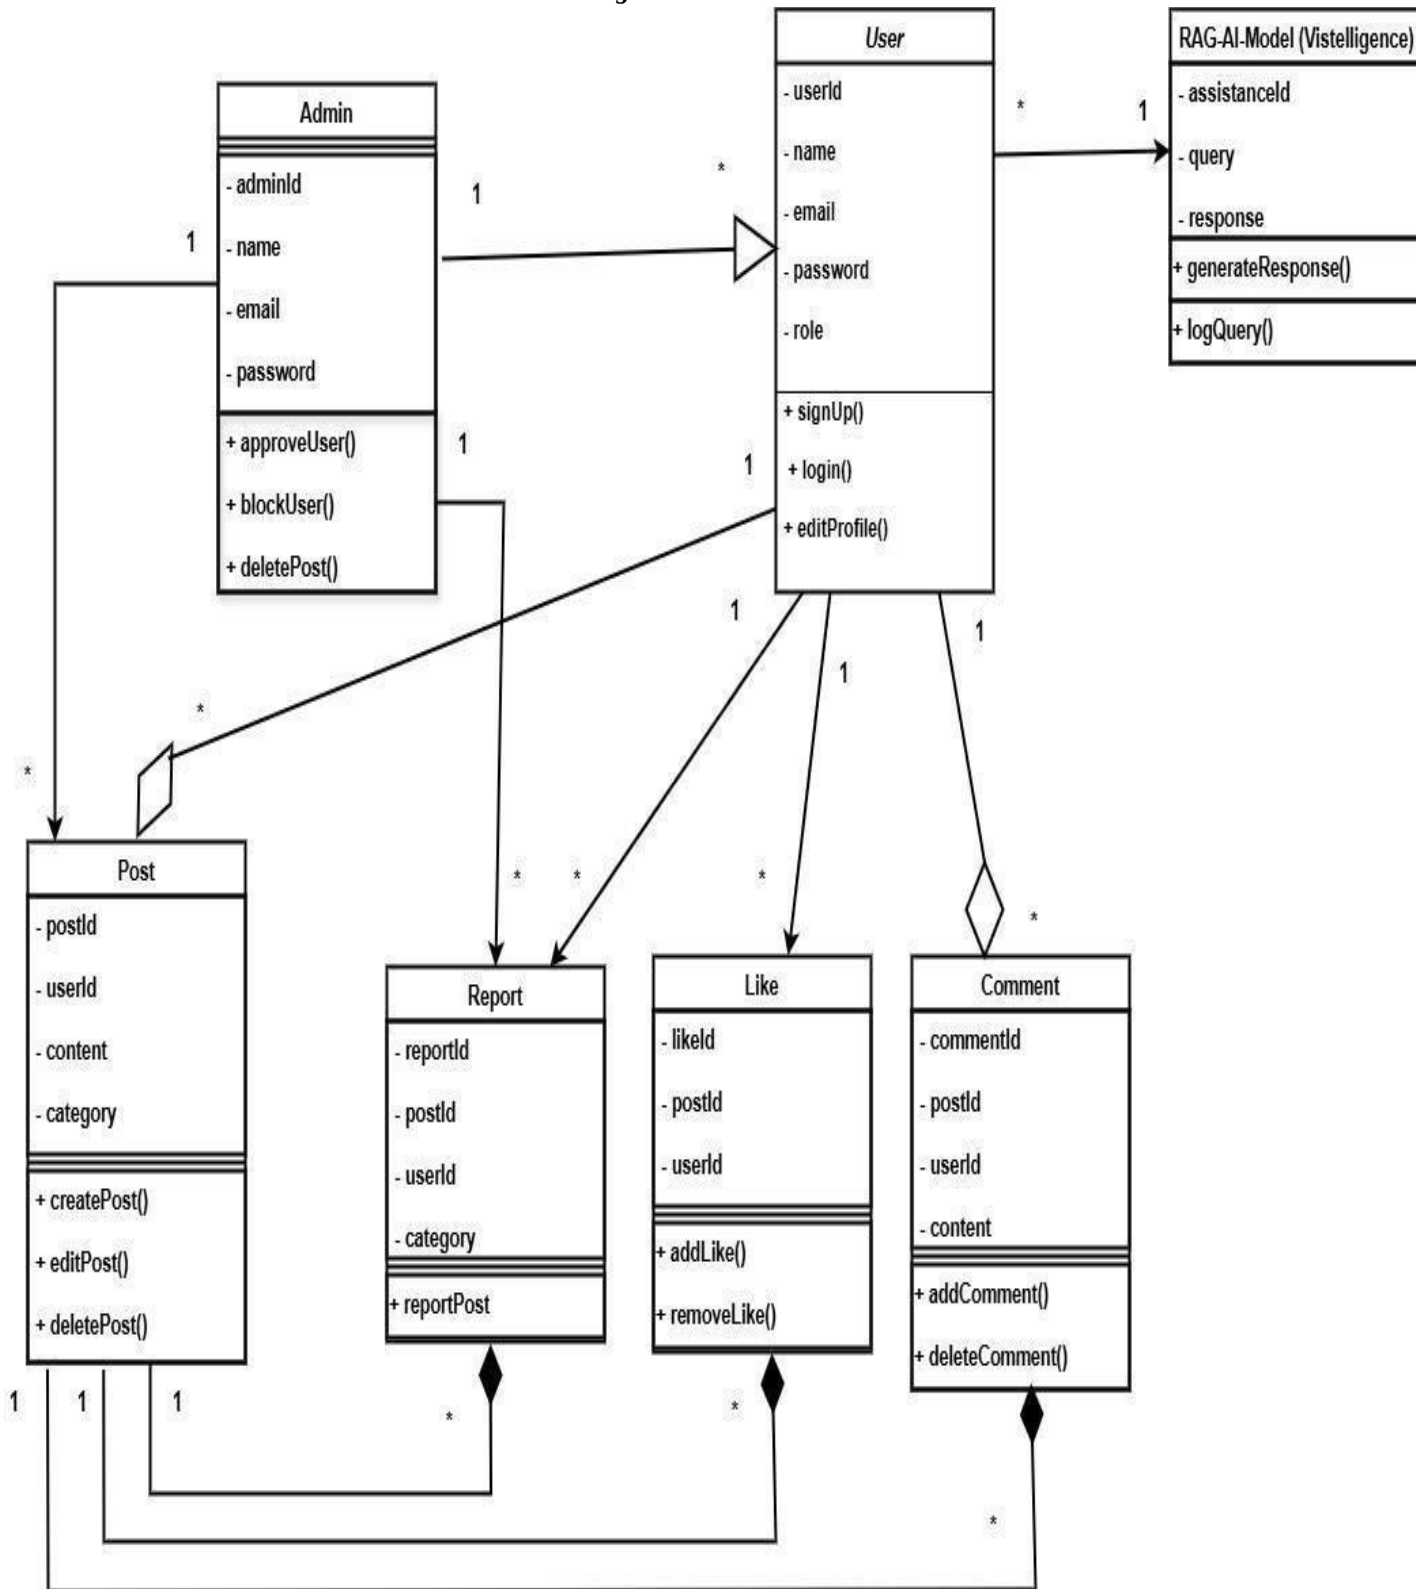

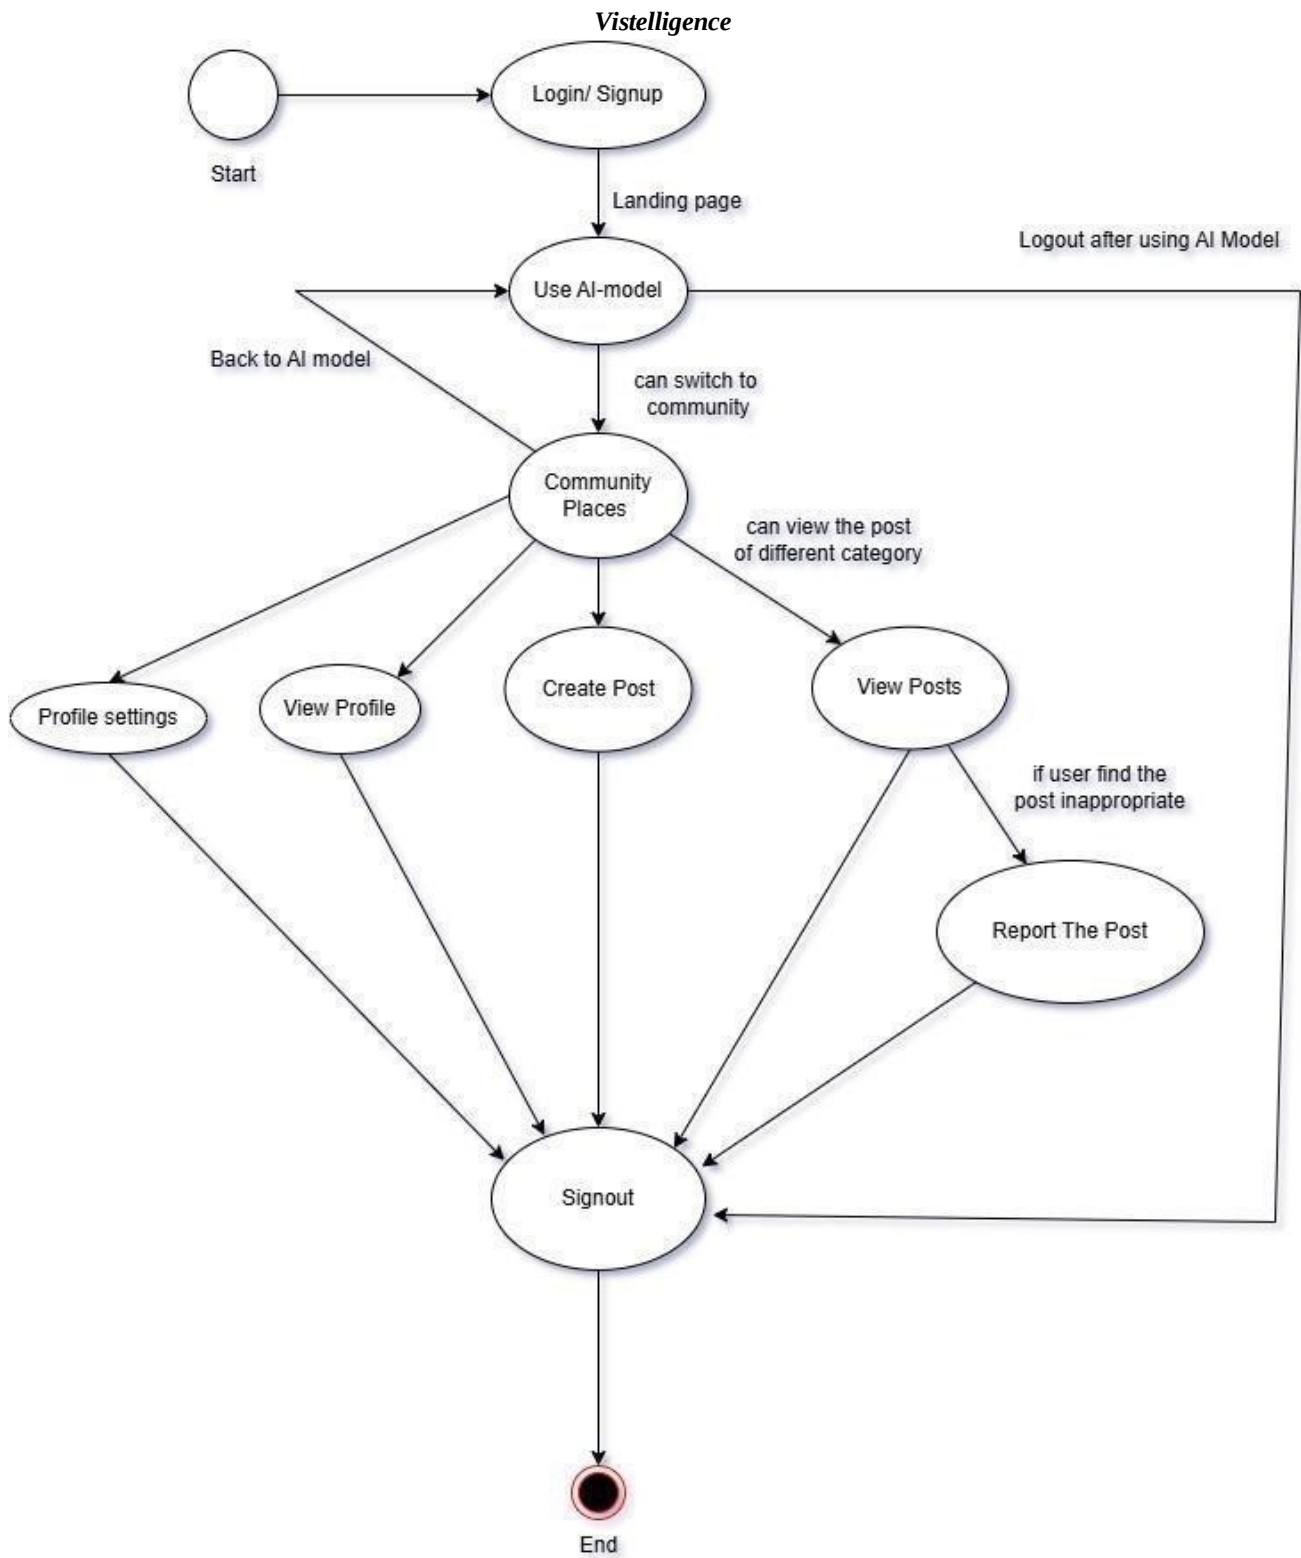

Figure 2.1.2: Class diagram

**Figure 2.1.3: Activity diagram**

**Decision Tables:****Login/Signup Process:**

| Condition | Is Email Valid? | Is Password Strong? | Is Username Unique? | Action                                    |
|-----------|-----------------|---------------------|---------------------|-------------------------------------------|
| Case 1    | Yes             | Yes                 | Yes                 | Register user                             |
| Case 2    | Yes             | Yes                 | No                  | Prompt "Username already taken"           |
| Case 3    | Yes             | No                  | Yes                 | Prompt "Weak password"                    |
| Case 4    | Yes             | No                  | No                  | Prompt "Weak password and username taken" |
| Case 5    | No              | Any                 | Any                 | Prompt "Invalid email"                    |

**AI Model Usage**

| Condition | User Logged In? | Model Available? | User Request Valid? | Action                               |
|-----------|-----------------|------------------|---------------------|--------------------------------------|
| Case 1    | Yes             | Yes              | Yes                 | Grant access to AI model             |
| Case 2    | Yes             | Yes              | No                  | Prompt "Invalid request"             |
| Case 3    | Yes             | No               | Any                 | Prompt "Model currently unavailable" |

***Vistelligence***

|        |    |     |     |                          |
|--------|----|-----|-----|--------------------------|
| Case 4 | No | Any | Any | Redirect to login/signup |
|--------|----|-----|-----|--------------------------|

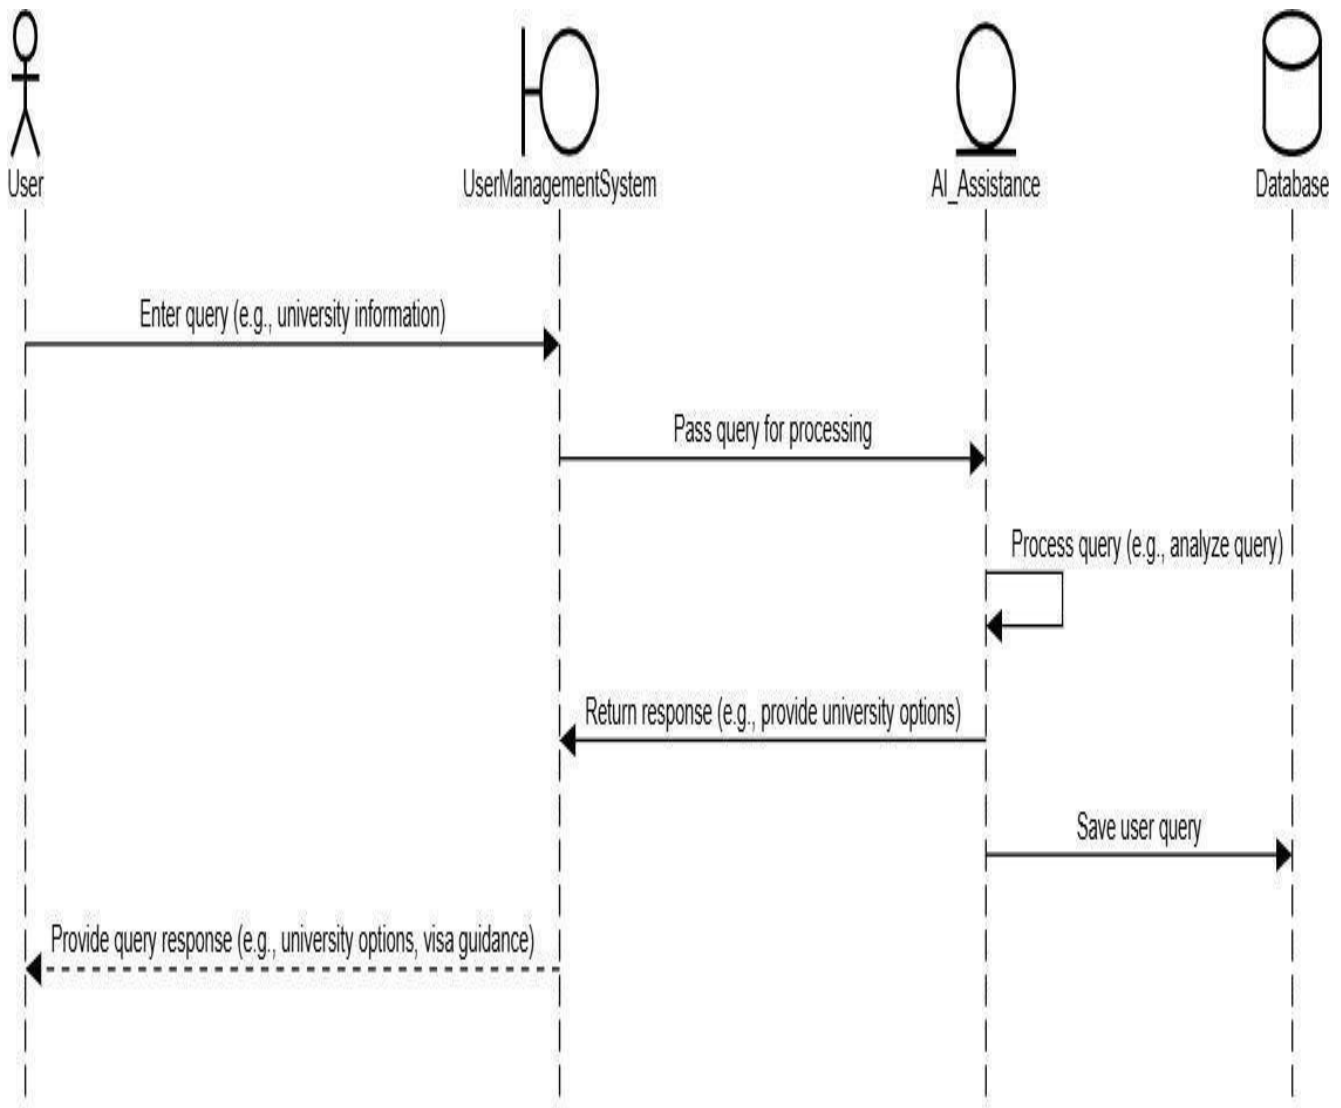

Community Places:

| Condition | Post Valid? | Category Available? | User Report Post? | Action        |
|-----------|-------------|---------------------|-------------------|---------------|
| Case 1    | Yes         | Yes                 | No                | Display posts |

|        |     |     |     |                               |
|--------|-----|-----|-----|-------------------------------|
| Case 2 | Yes | Yes | Yes | Mark post as inappropriate    |
| Case 3 | No  | Any | Any | Prompt "Invalid post content" |
| Case 4 | Any | No  | Any | Prompt "Category unavailable" |

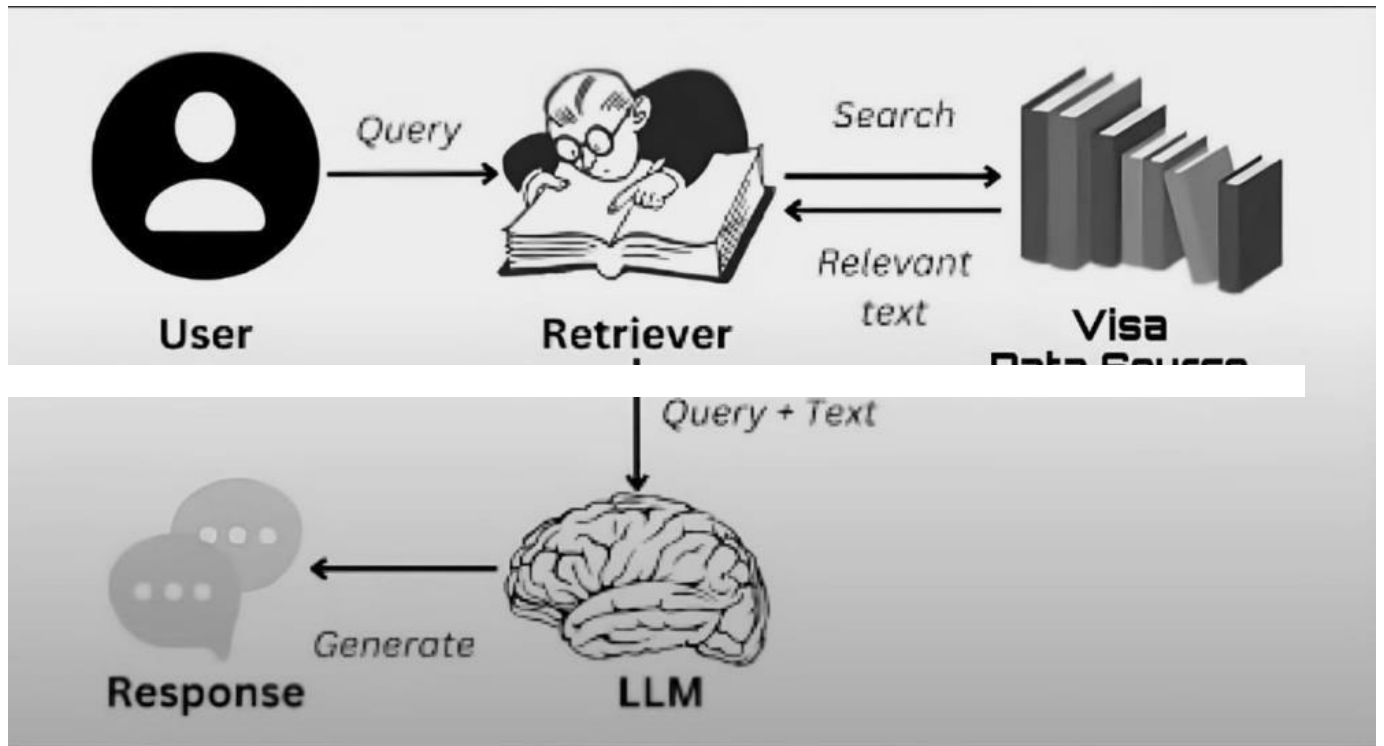

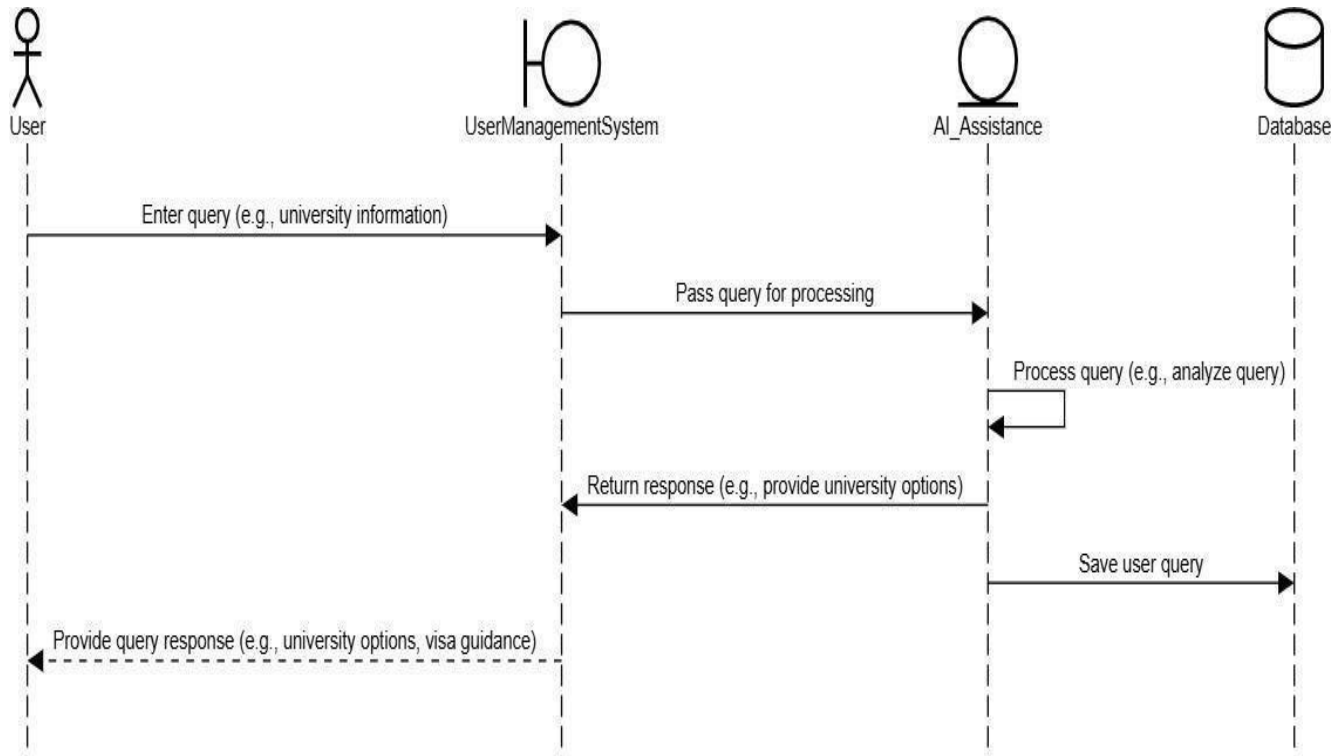

Figure 2.2.13: AI interaction model

## 2.3 Design Reuse and Design Patterns

### Reusable Components:

- **Authentication Module:** A pre-exist, modular authentication system is reused to handle user login, registration, and session management.
- **Payment Gateway Integration:** Reuse of a standard API integration for payment processing, ensuring compatibility and reliability.

### Design Patterns:

- **Singleton Pattern:** Applied in managing configuration settings and logging services to ensure a single, globally accessible instance.
- **Factory Pattern:** Used for creating objects.
- **Observer Pattern:** Implemented for real-time updates, such as notifying users about their queries and suggestions (community forum)
- **User Interface Templates:** Standardized UI components (buttons, forms, and dashboards) from a library like Bootstrap were reused to ensure a consistent and responsive design.

### Database Schemas:

- Predefined schema templates were adapted for managing user data, portfolios, and transactions, reducing the time required for database design.

## 2.4 Technology Architecture

### Platform

- **Front-end:** Built using HTML, CSS, and JavaScript frameworks like React for a responsive and user-friendly interface.
- **Back-end:** Powered by Node.JS to handle server-side tasks and manage APIs.

### System Hosting

- Hosted on cloud platforms like AWS or Google Cloud for reliability and scalability.
- Databases such as MySQL or MongoDB store user and transaction data.

### Connectivity Requirements

- Requires stable internet for user interactions and data syncing.
- Uses HTTPS for secure communication and integrates with third-party APIs like payment processors.

### Modes of Operation Online Mode:

- Two-factor authentication (2FA) and encryption protect user data.
- Regular backups and recovery plans ensure safety.

### Network

Globally accessible over the internet with secure HTTPS connections.

## 2.5 Architecture Evaluation

### Why These Choices?

- **React vs. Angular/Vue:**

We chose React because it's easy to build with and has a huge community. It's great for making changes quickly and keeping our code organized. Our team also really likes how data flows in one direction and how hooks make things easier

- **Node.JS vs. Django/Rails:**

Node lets us use JavaScript for both the front end and back end, which means less switching between languages. It's fast and works well for what we need.

- **AWS vs. On-Prem/Other Clouds:**

AWS gave us the tools we needed, plus it's easy to grow with. We only pay for what we use, and it works all over the world.

- **MySQL vs. PostgreSQL/MongoDB:**

We use MySQL for important user data because it's reliable and structured. For things like logs and analytics, we also use MongoDB it's better for storing flexible data.

### Pros & Cons

- **React**

*Pros:* Fast updates on the screen, lots of community support, and easy-to-reuse building blocks.  
*Cons:* Takes time to set up, and some features can be tricky to learn at first.

- **Node.js**

*Pros:* Same language (JavaScript) on both front and back ends, handles lots of requests well, and has tons of useful packages.  
*Cons:* Can get messy with too many callbacks, and it runs on one thread (though there are ways to work around that).

- **AWS**

### *Vistelligence*

*Pros:* Easy to scale, available in many places worldwide, and comes with a lot of ready-to-use tools.

*Cons:* Pricing can be confusing, and it's easy to get tied into their system.

- **MySQL + MongoDB**

*Pros:* MySQL is great for structured, reliable data. MongoDB is flexible and good for changing or unstructured data.

*Cons:* Using two databases means more work, and keeping data in sync can be tricky.

### **Alternatives Considered**

- **Front-end:** Vue.js for simplicity; dropped because React's ecosystem better matched our AI-driven widgets.
- **Back-end:** Python/Django for rapid prototyping; passed for Node.js to keep language uniform.
- **Cloud:** Google Cloud's AI suite was tempting; AWS won by offering more mature DevOps tooling.
- **Database:** PostgreSQL's advanced features are on our roadmap; for now, MySQL's stability fits our timeline.

## **3. Detailed/Component Design**

In this section, detailed information regarding the types of interactions and collaborations required within the project is provided.

### **3.1 Component-Component Interface**

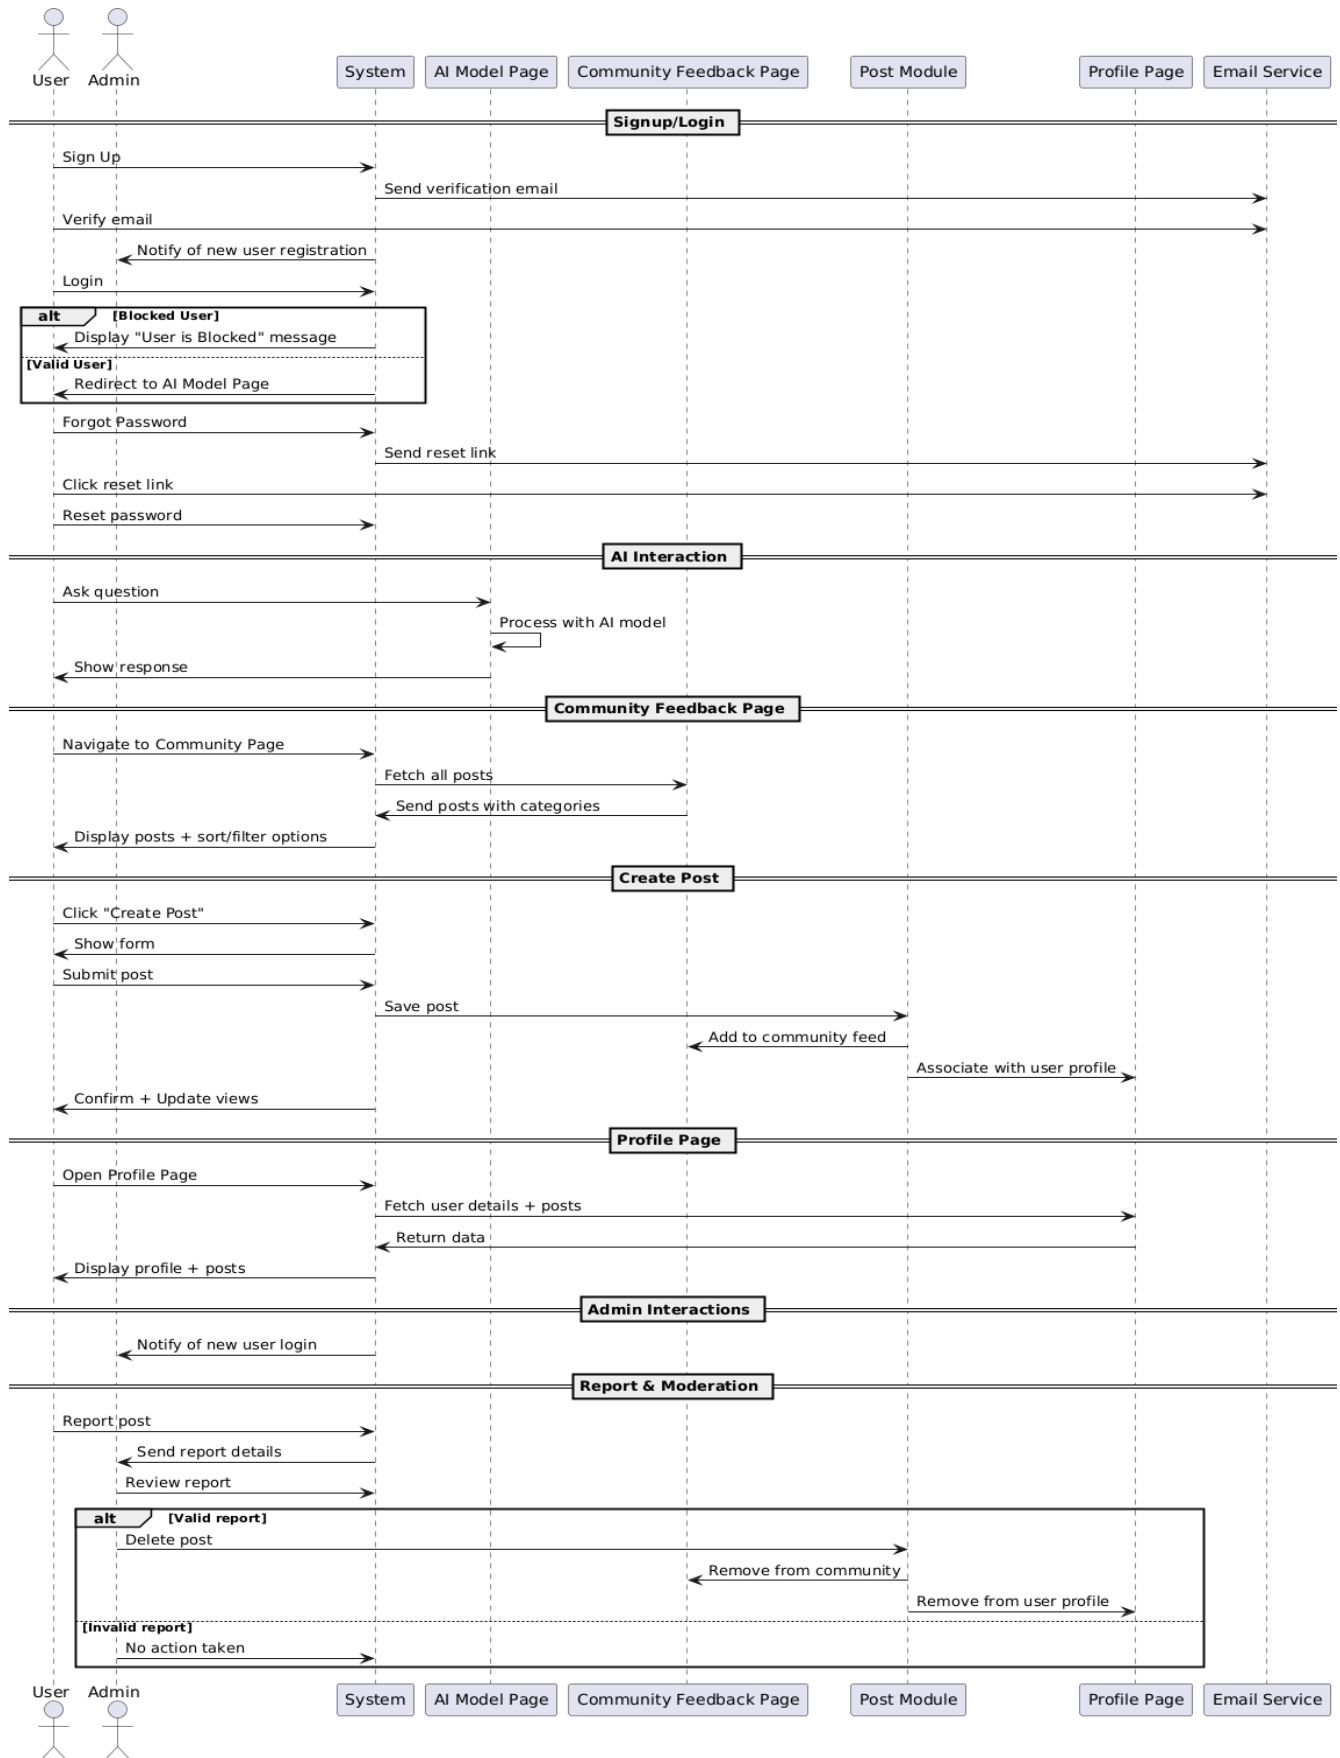

The system is designed with a modular architecture where the front-end, back-end, and AI modules interact through REST APIs. Key interactions include:

- **User Interface → Authentication Service:** For login, signup, and profile updates.
- **User Interface → Visa Recommendation Engine:** For personalized visa suggestions.
- **Community Module → Post Management Service:** For creating, editing, and reporting posts.
- **Admin Panel → User Management Service:** For blocking/unblocking users and managing posts.

These interactions are managed using API calls, token-based authentication (JWT), and real-time data fetching (Axios, Fetch API).

# Vistelligence

**Figure 3.1.1 : Sequence diagram**

For further details, review ; **Figure 3.2.3: Collaboration diagram** and **Figure 2.2.5, to 2.2.9.**

### 3.2 Component-External Entities Interface

The system interacts with the following external services:

- **SMTP Email Server:** For user email verification and password reset (example: AWS SES).
- **Payment Gateway** (planned): Integration with Stripe or PayPal for visa-related service payments.
- **Third-party APIs** (future expansion): For real-time visa policy updates.

Example flow:

- After user signup, the system calls the SMTP server to send a verification email.
- Payment gateway APIs will later be used to securely process payments.

### 3.3 Component-Human Interface

**Screens where users interact with the system:**

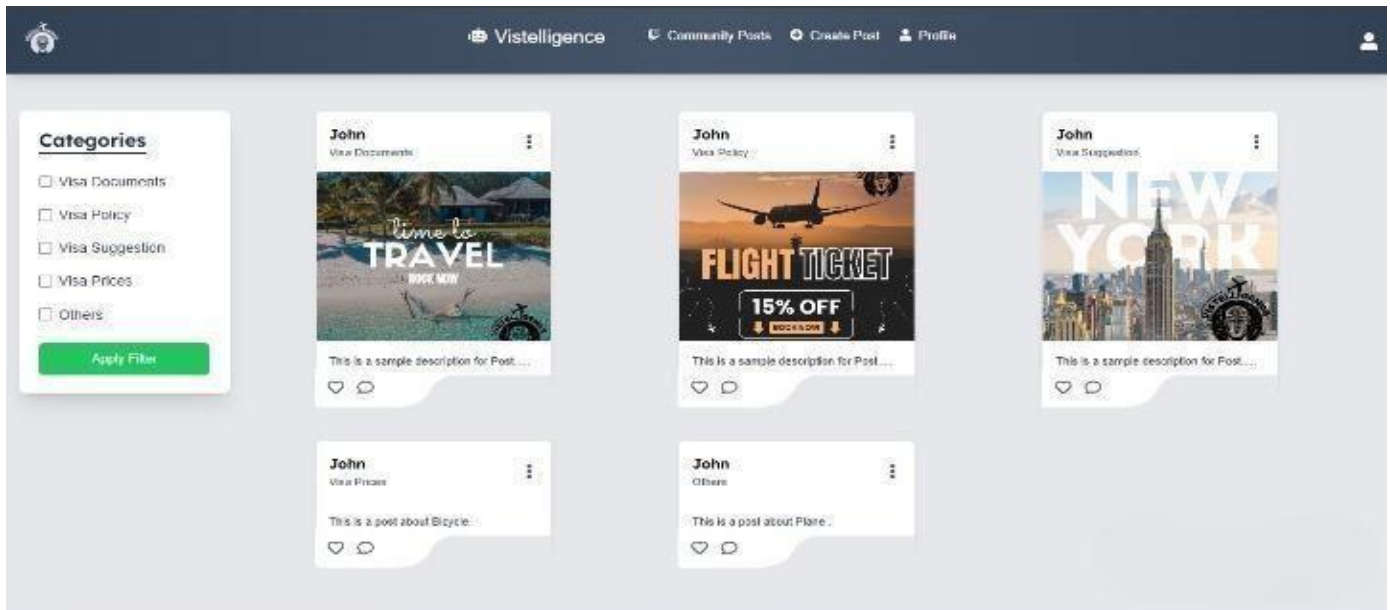

- Registration/Login pages
- Dashboard (Profile, Recommendations, Community Access)
- Post Creation and Community Interaction Pages
- Admin Panel (Manage Users and Posts)

**HCI Norms Followed:**

- Simple, intuitive, and consistent design (React + Bootstrap).
- Proper use of validation messages for user input errors.
- Responsive design for mobile, tablet, and desktop screens.
- Use of icons and colors for accessibility.

## 4. Screenshots/Prototype

### Community Posts:

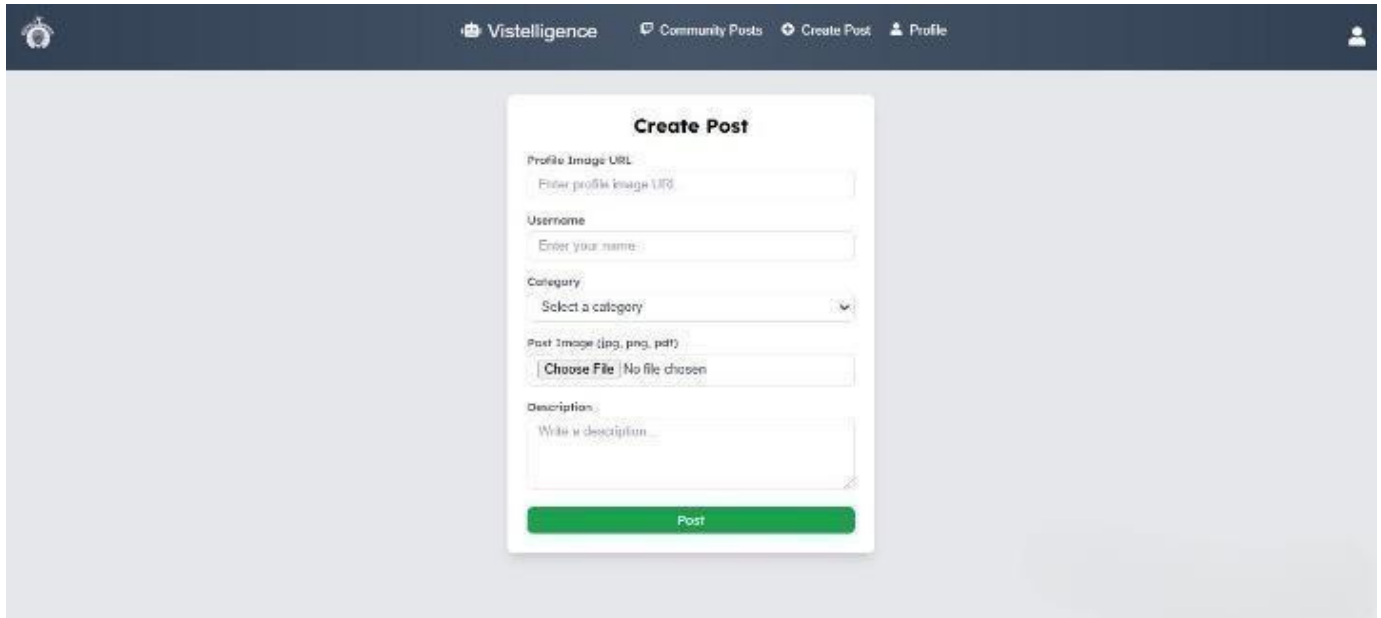

### Footer:

### Vistelligence:

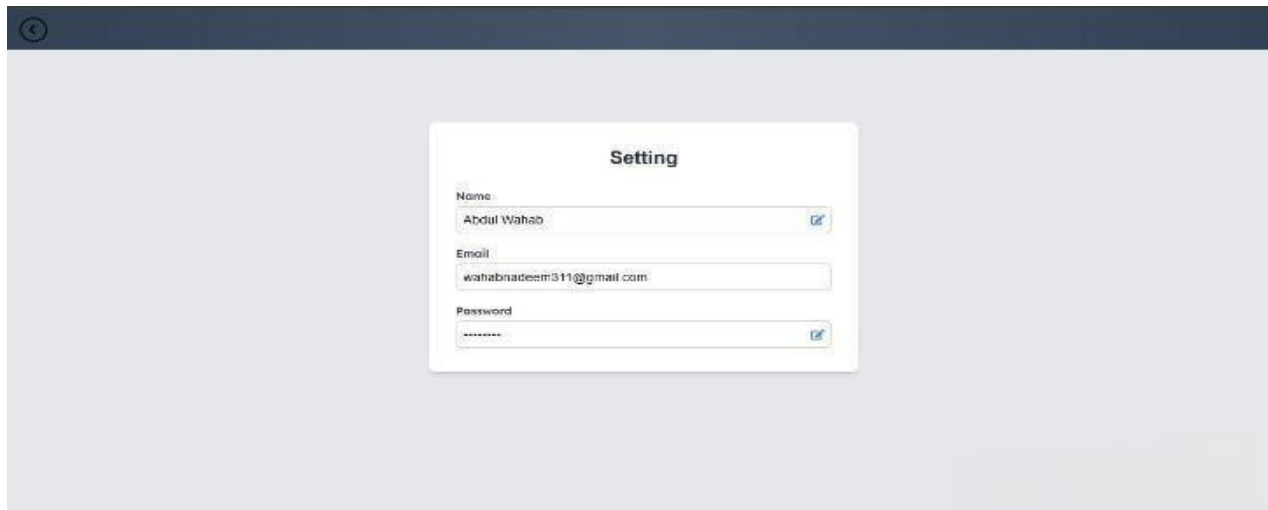

## Create Post Page:

The screenshot shows the 'Create Post' page of the Vistelligence application. The page has a dark blue header with the Vistelligence logo and navigation links: 'Community Posts', 'Create Post', and 'Profile'. The main content area is light gray and features a white 'Create Post' form. The form includes the following fields: 'Profile Image URL' (text input), 'Username' (text input with placeholder 'Enter your name'), 'Category' (dropdown menu with 'Select a category'), 'Post Image (jpg, png, pdf)' (file upload area with 'Choose File' button and 'No file chosen' text), and 'Description' (text area with placeholder 'Write a description'). A green 'Post' button is at the bottom of the form.

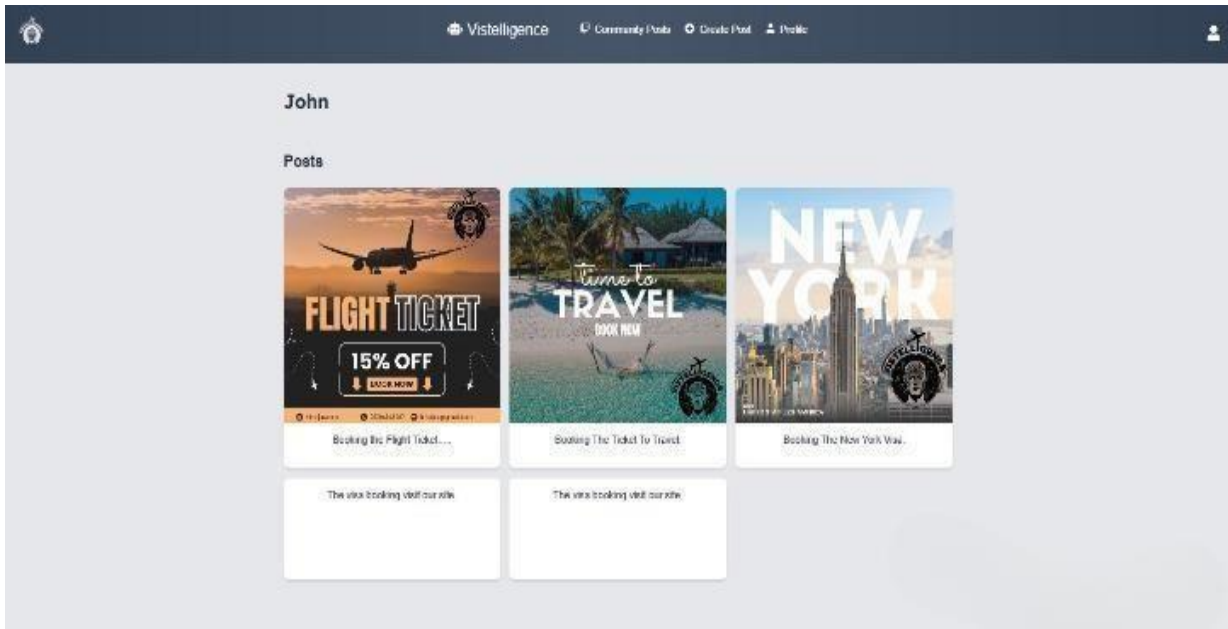

## Setting Page:

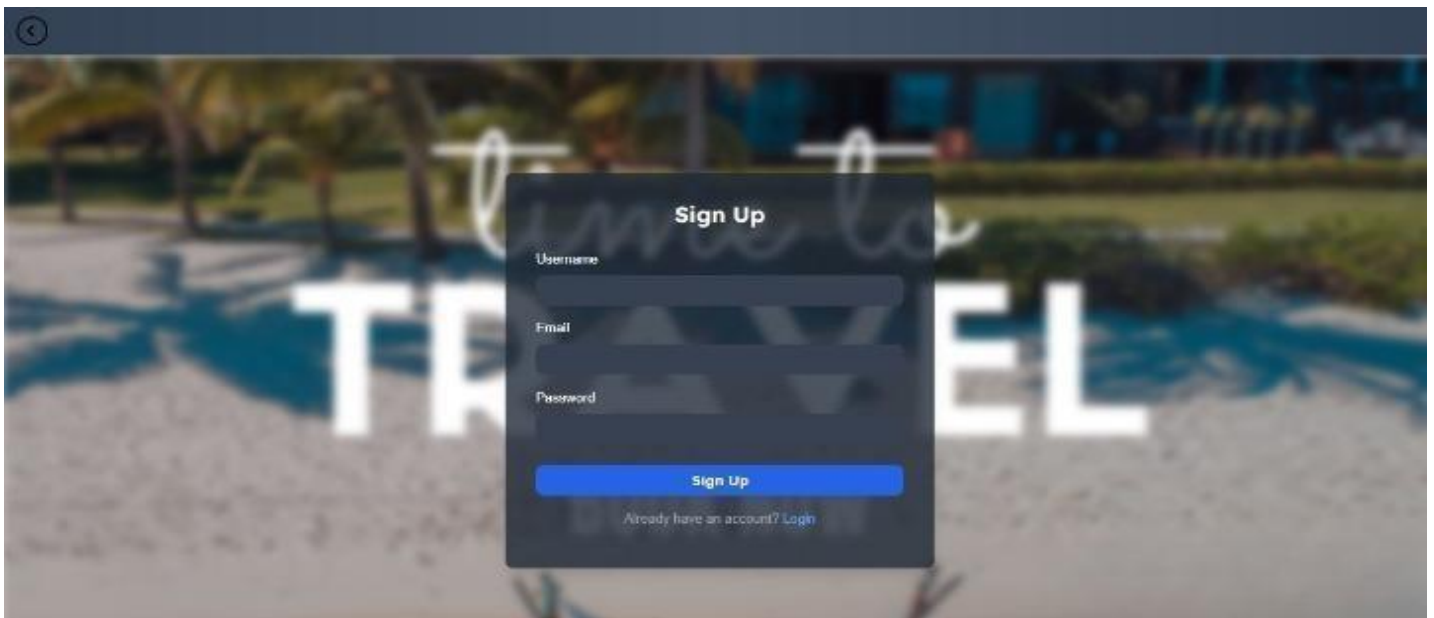

The screenshot shows the 'Setting' page of the Vistelligence application. The page has a dark blue header with a back arrow icon. The main content area is light gray and features a white 'Setting' form. The form includes the following fields: 'Name' (text input with value 'Abdul Wahab'), 'Email' (text input with value 'wahabnadeem311@gmail.com'), and 'Password' (password input with masked characters and a toggle icon). Each input field has a small blue icon on the right side.

## Vistelligence

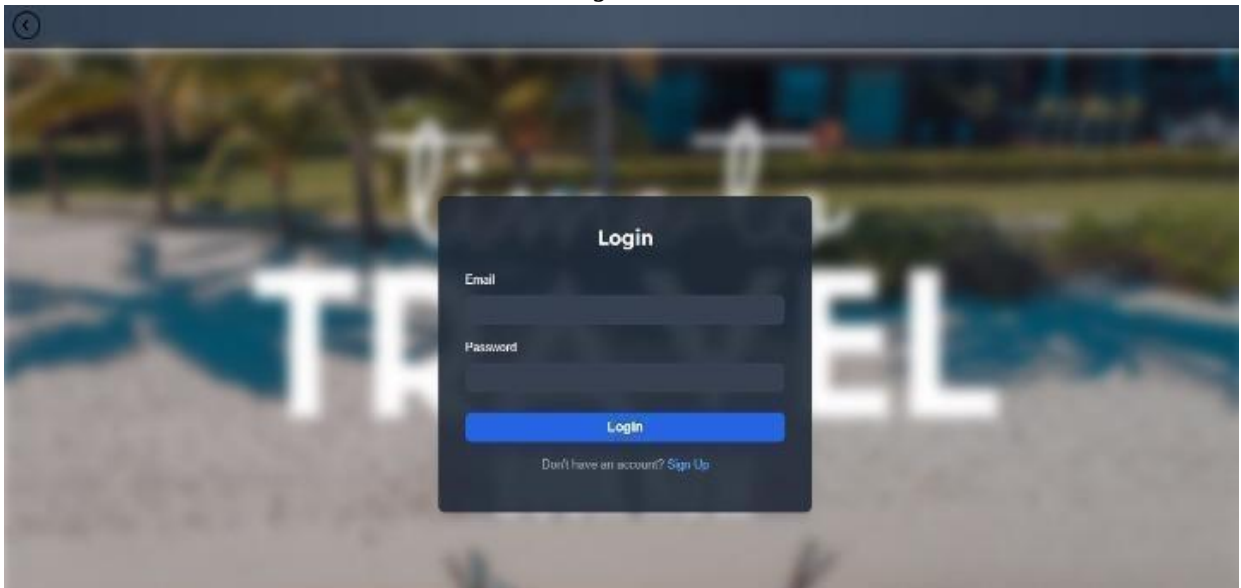

### Profile :

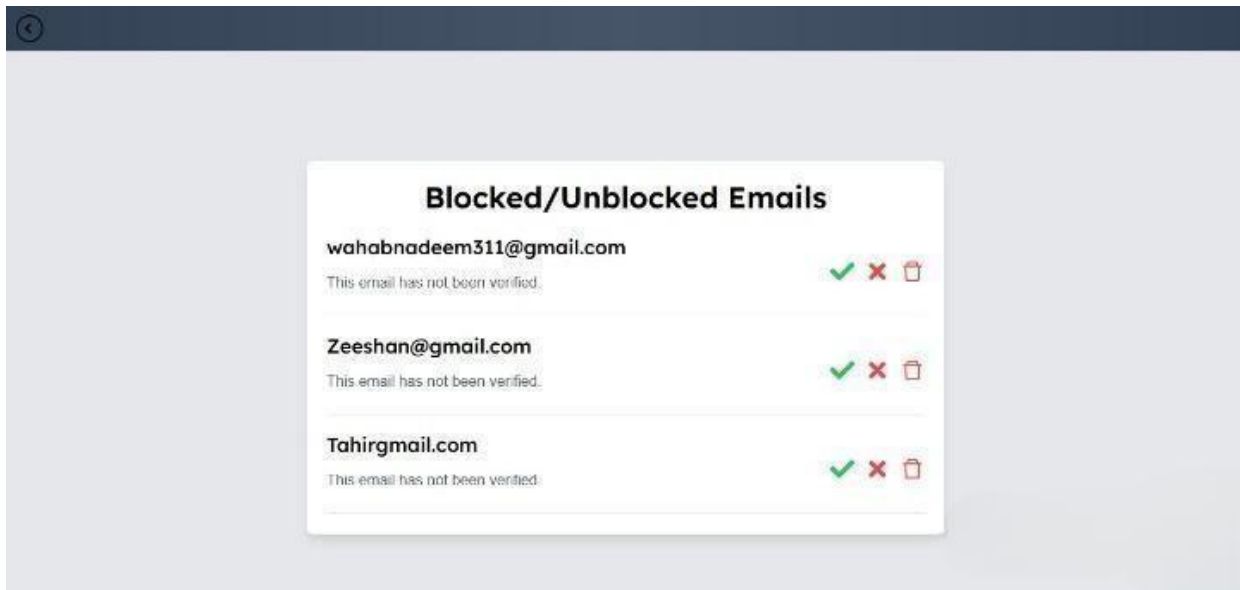

### Sign-Up Page:

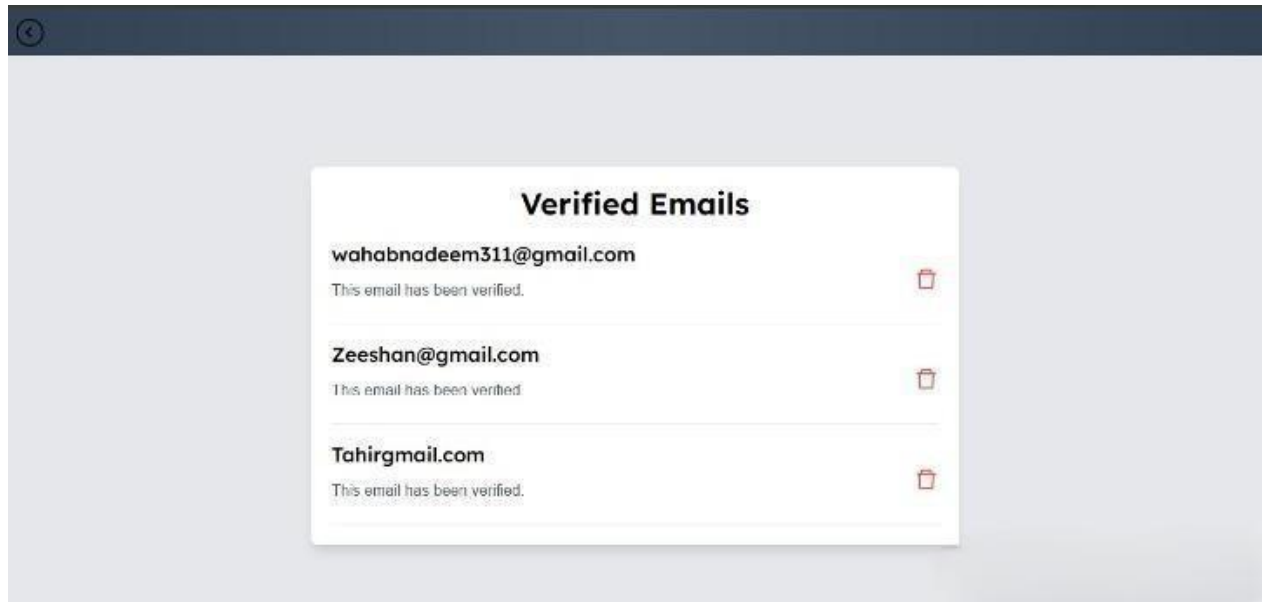

### Login-In Page:

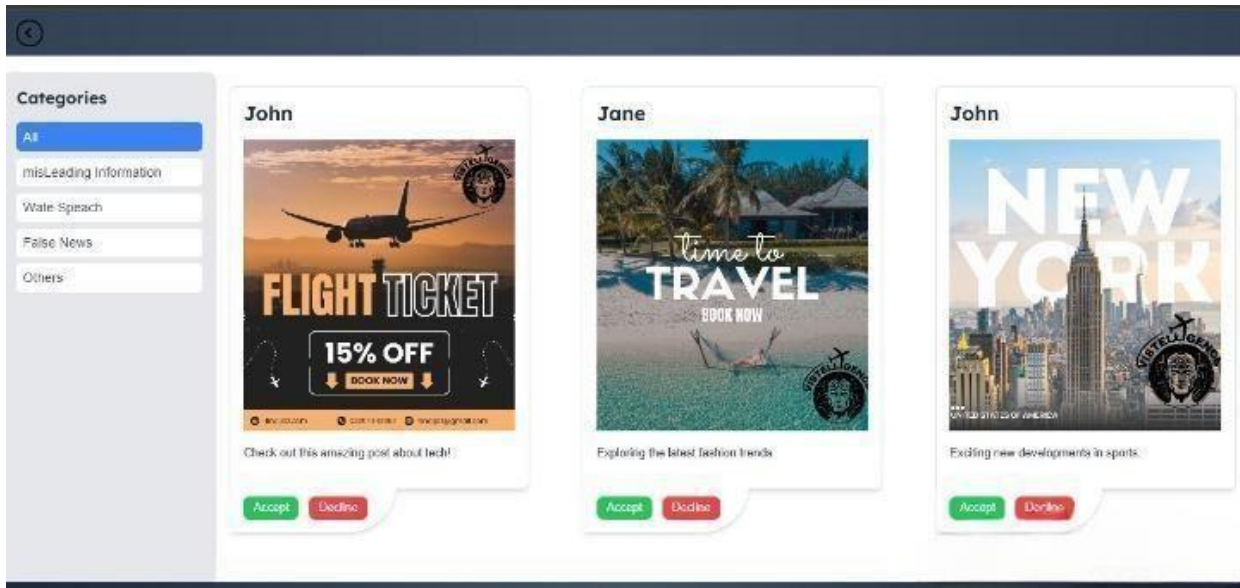

### Block/Unblock Email:

## Verified Emails:

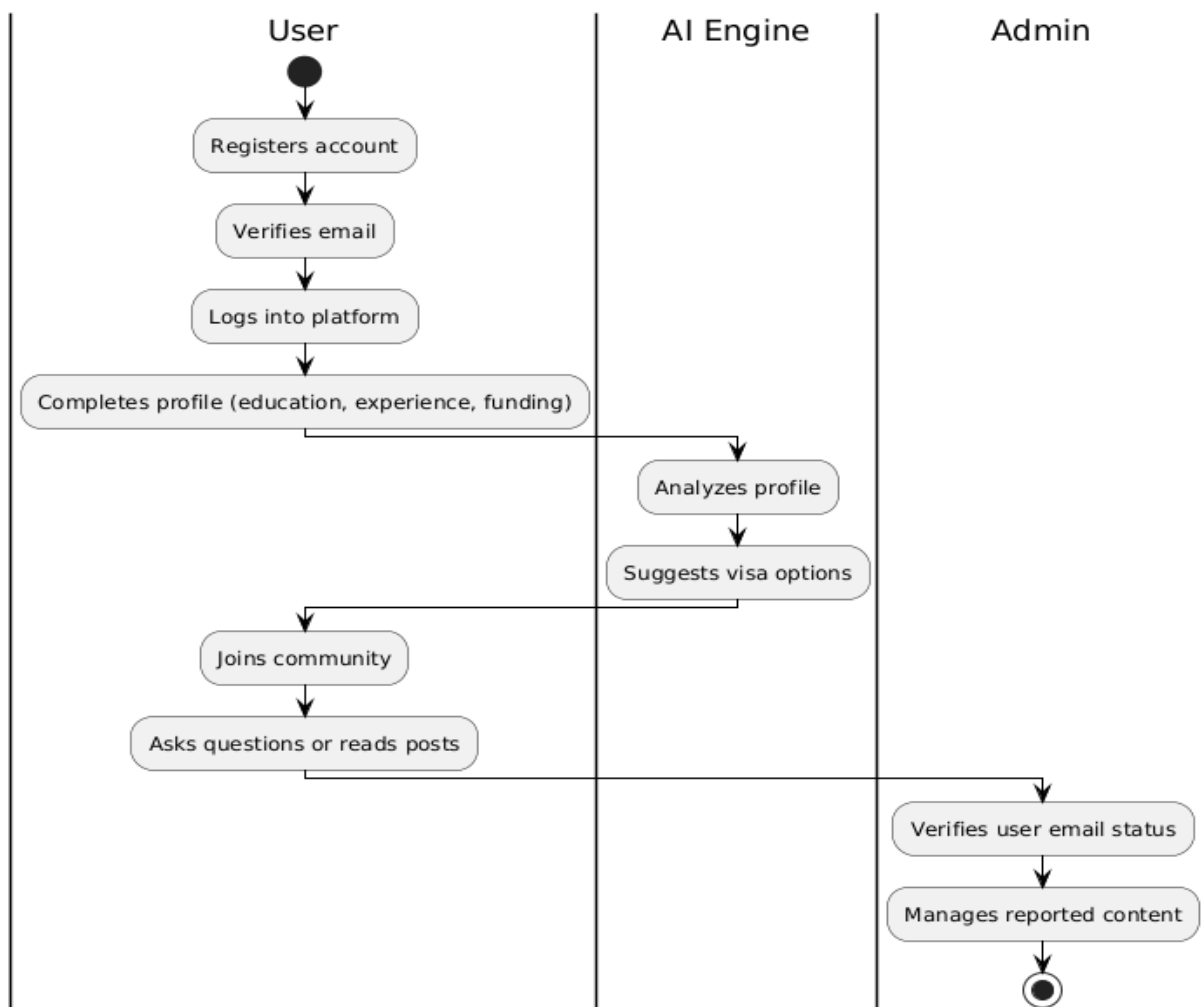

## Reported-Post:

## 4.1 Workflow

### Complete Workflow:

1. User registers and verifies email.
2. User logs into the platform.
3. Completes profile with education, experience, and funding info.
4. AI Engine analyzes profile and suggests visa options.
5. User can join the community, ask questions, or read posts.
6. Admin manages user-reported content and verifies email statuses.

**Figure 4.1: Swimlane daigram**

*For further details, review Figure 2.2.5:Swimlane diagram*

## 4.2 Screens

1. **Signup Screen:** User registers with email, password, and phone number.
2. **Login Screen:** User login with verified credentials.
3. **Dashboard:** Displays profile, visa recommendations, and community access.
4. **Create Post Page:** User can post questions or experiences.
5. **Community Feed:** List of user posts with reply options.
6. **Admin Panel:** View, block/unblock/delete users and posts.

## 4.3 Additional Information

*<NO additional interfaces beyond what has been described.>*

# 5. Other Design Details

## 5.1 AI Model Details

- **Features Considered:** Education Level, Experience, Financial Resources, Country Preference.
- **Data set:**  
<https://docs.google.com/document/d/1ybK7a10n1Fgk49Poj4FK8yfZOBcFF8SxkX-oN0fHWso/edit?usp=drivesdk>

**Note :** “Our model is Rag-Based”

## 5.2 Security Details

- **Two-Factor Authentication:** Optional feature planned.

## 5.3 Design Principles

- **Single Responsibility Principle:** Each module has one clearly defined purpose.
- **Separation of Concerns:** Frontend and backend are strictly separated.
- **DRY (Don't Repeat Yourself):** Reusable React components and Node.js middleware used.

## 6. Test Specification and Results

### 6.1 Test Case Specification

## 7. Project Completion Status

**Table 7.1 : Project Completion Status**

| Module Name                        | Status (Complete) |
|------------------------------------|-------------------|
| User Registration & Authentication | Complete          |
| User Profile Management            | Complete          |
| AI Recommendation Engine           | Completed         |
| Community Forum                    | Complete          |
| Admin Panel                        | Complete          |
| Cost Estimator                     | Completed         |

**Table 7.2: Objective(s)/Target(s) Status**

| <b>Target/Objective</b>                                          | <b>Status</b><br>(Completed,<br>Partially Completed,<br>Not Completed) | <b>Reason(s)</b>                                                                          |
|------------------------------------------------------------------|------------------------------------------------------------------------|-------------------------------------------------------------------------------------------|
| Simplify visa application processes using AI                     | Completed                                                              | Successfully integrated AI-based recommendation and analysis modules                      |
| Provide personalized visa, country, and university suggestions.  | Completed                                                              | User profile-based customization and suggestions implemented and tested.                  |
| Enhance success rate of applications using data-driven insights. | Partially Completed                                                    | Approval prediction model is operational; more training data needed for greater accuracy. |
| Build a peer-to-peer learning community.                         | Completed                                                              | Fully functional forum with post, report, and admin controls is integrated                |
| Offer real-time cost estimation for various countries.           | Partially Completed                                                    | Estimator works for popular countries, but lacks fallback for rare destinations           |

**Number of Targets Completed: 3**

**Number of Targets Partially Completed: 2**

**Number of Targets Not Completed: 0**

## 8. Deployment/Installation Guide

### i. Clone Repository:

- ✧ git clone <https://github.com/KubraNoor01/MY-FinalYearProject>
- ✧ cd [MY-FinalYearProject](#)

### ii. Install Dependencies:

#### **Backend:**

- ✧ cd server
- ✧ npm install

#### **Frontend:**

- ✧ cd client
- ✧ npm install

### iii. Environment Configuration

- ✧ Create .env files in server/ and client/ directories with appropriate environment variables (e.g., DB\_URI, JWT\_SECRET, API\_KEYS, etc.)

### iv. Run MongoDB (or use Atlas):

### v. Run the Application:

- ✧ **Backend:** `npm start`
- ✧ **Frontend:** `npm run dev`

### vi. Access Application:

Open browser and navigate to: `http://localhost:`

## 9. User Manual

### Getting Started:

- i. Register an Account:** Go to Sign-Up page and provide name, email, password, and phone number.
- ii. Verify Email:** Check your email and click the verification link.
- iii. Log In:** Enter verified email and password on Login page.
- iv. Complete Profile:** Add educational background, experience, and financial details.
- v. Get Visa Suggestions:** Receive AI-generated visa recommendations tailored to your profile.
- vi. Prepare for Interview:** Use preparation tips and practice questions based on selected country.
- vii. Estimate Visa Costs:** Check estimated cost breakdown for selected countries.
- viii. Community Interaction:** Post and reply in the community forum for peer support.
- ix. Admin Features:** Admin can log in via admin panel, manage user reports, block/unblock users, and monitor content.

| <b>Assign SDGs to Project</b>            | SDG 4 (Quality Education), SDG 10 (Reduced Inequalities), SDG 8 (Decent Work and Economic Growth)                                                                                                                                                                                                                                                                                                                                                                                 |
| <b>Motivation of Project</b>             | To reduce the complexities of the visa application process using AI and data-driven tools, making global opportunities more accessible.                                                                                                                                                                                                                                                                                                                                           |
| <b>Practical / Potential Application</b> | Can be deployed as a visa consultation service platform, used by students, educational consultants, and immigration firms.                                                                                                                                                                                                                                                                                                                                                        |
| <b>Abstract</b>                          | Vistelligence is an AI-powered web app that simplifies the visa process by analyzing user profiles to give tailored recommendations for visa types, countries, and universities. It predicts approval chances, offers interview prep, cost estimations, and document guidance. With real-time data and a built-in community forum, it helps users make confident, informed decisions about studying, working, or settling abroad turning a complex process into a smooth journey. |
| <b>Key Technical Features</b>            | AI-based recommendation engine, cost estimator, interview prep, secure login, admin Pannel, RESTful APIs, MongoDB, React.js, Node.js, JWT authentication                                                                                                                                                                                                                                                                                                                          |

|----|----------------------------------------|---------------------|----------|----------|---------|
|    |                                        |                     |          | Hours    | Minutes |
| 1  | Password validation missing            | Development         | Resolved | 00       | 30.0    |
| 2  | Forget password email failure          | Testing             | Resolved | 00       | 30.0    |
| 3  | UI feedback missing on admin actions   | Testing             | Resolved | 00       | 30.0    |
| 4  | Estimation fallback for rare countries | Integration Testing | Pending  |          |         |

**Table 1: List of non-trivial defects**

*The system was independently verified against the SRS, SDS, and design documents.*

*All critical functional requirements were validated through manual testing.*

*All major defects identified will be fixed before the final system build.*
